- Maintaining and troubleshooting servers and desktops
- Professional client communication

SKILLS

- JavaScript
- HTML5/CSS
- Web/App Development
- Vue 2/3
- Python
- SQL

PROJECTS

SECRETSANTA

In this project my team designed a website that would automate the process and preserve the secrecy of the traditional "Secret Santa" practiced by families. We utilized Vue as the framework for this project so JavaScript, CSS, and HTML could work in harmony. We used GitHub for our repository so we could work in parallel and synchronize when needed.

ANIMAL VOICE APP

In this project my team designed an app that would take in audio files and decipher what animal was recorded. We used Android studio and its GUI system to design the layout of the app. Then we used Firebase to create user accounts with data such as a username and password. To decipher the animal, we used python and implemented machine learning from articles given.
